Research Summary

Alumina Sol is a colloidal suspension of fine particles of aluminum oxide, also known as alumina, in water. It is often used as a polishing agent, binding agent, or lubricant in various industrial applications. Alumina sols can vary in size, with smaller particles being preferred for applications such as coatings and abrasives, while larger particles are used for refractory materials. The properties of alumina sols can be manipulated by adjusting the pH, concentration, and type of stabilizers added to the suspension.
