Research Summary

Aluminium dross is a by-product of aluminium smelting and consists of impurities and non-metallic material that float to the surface of the molten metal. The recycling of aluminium dross involves separating the aluminium from the non-metallic material and processing it into various forms for reuse. There are several methods for recycling aluminium dross, including:

1. Mechanical processing: This involves crushing the dross into small pieces and separating the aluminium from the non-metallic material using a combination of magnetic and density separation.
2. Pyrometallurgical processing: This involves melting the dross in a furnace and separating the aluminium from the non-metallic material through a combination of gravity and magnetic separation.
3. Chemical processing: This involves using chemical reactions to convert the non-metallic material into useful products, such as alumina or aluminium sulfate, while recovering the aluminium. The recycling of aluminium dross helps to reduce waste and conserve resources, as well as providing a cost-effective source of raw materials for the production of new aluminium products.

The major global manufacturers of Aluminium Dross Recycling include Novelis, Hongqiao Group, Shandong Nanshan Aluminium, Norsk Hydro, Aluminum Corporation of China, UACJ, Alcoa, Chongqing Shunbo Aluminum, Constellium, Hebei Sitong New Metal Material, Sigma Group, Huajin Aluminum, Ye Chiu, etc. The global players competition landscape in this report is divided into three tiers.
