Research Summary

Aluminum brazing paste is a special type of brazing material that is used to join two or more aluminum-based components together. The paste is made up of a mixture of metal powders (such as aluminum, copper, and zinc) that are blended with a fluxing agent to create a paste-like consistency. The brazing paste is then applied to the aluminum surfaces that need to be joined, and the materials are heated to a temperature that allows the paste to melt and flow between the two surfaces, creating a strong bond. This process is often used in the automotive and aerospace industries, where joining aluminum components is a common requirement.

The major global manufacturers of Aluminum Brazing Paste include Lucas-Milhaupt, Fusion, Castolin Eutectic, Continental, Brazing Technologies, Stella Welding Alloys, Anhui Huazhong, etc. The global players competition landscape in this report is divided into three tiers.
