Research Summary

Aluminum nitride filler (AlN) is a type of ceramic material used as a filler or additive in various applications, particularly in the field of electronic packaging and thermal management. AlN is a high-performance material known for its excellent thermal conductivity, electrical insulation properties, and thermal expansion coefficient similar to that of silicon, which makes it compatible with semiconductor materials. In electronic packaging, AlN fillers are mixed with polymer matrices to form thermally conductive composites. These composites are used as substrates or encapsulation materials for electronic components, such as integrated circuits (ICs) and power modules, to enhance heat dissipation and thermal management. AlN fillers are also used in the production of thermal interface materials, such as thermal pastes and pads, to improve heat transfer between electronic devices and heat sinks. Additionally, AlN fillers are utilized in ceramics and composites for various industrial applications where high thermal conductivity and electrical insulation are required. Overall, AlN fillers play a vital role in improving thermal performance and reliability in electronic systems and other high-temperature applications.
