Research Summary

Aluminum plastic film, also known as aluminum laminated film or aluminum foil laminated film, is a composite material made of polyethylene (PE) and aluminum foil. It is commonly used as a packaging material for pouch lithium batteries due to its high barrier properties against oxygen, moisture, and other gases that can degrade the performance and safety of the battery. The aluminum layer in the film provides a robust and impermeable barrier to prevent the ingress of external materials, while the PE layer is flexible, heat-sealable, and easy to process to form a pouch. The combination of these two materials ensures that the lithium battery is well-protected and maintains its high performance for a long time. Pouch lithium batteries are widely used in various industries, such as consumer electronics, electric vehicles, and renewable energy storage. The quality and performance of the battery are critical to its application, making the aluminum plastic film an essential component for the battery packaging.
