Research Summary

Aluminum slugs are small, cylinder-shaped pieces of aluminum that are used as raw materials in the manufacturing process of various products. These slugs are created by melting and casting aluminum into molds, which are then extruded to create rod-shaped billets. These billets are then cut into shorter lengths and pointed to form slugs. Aluminum slugs are often used in the production of aerosol cans, automotive parts, and other industrial products. They are valued for their durability, resistance to corrosion, and overall strength.
