### Research Summary

An amorphous core distribution transformer is an energy-efficient electrical device designed to step down high-voltage electricity for distribution to residential, commercial, and industrial users. Unlike traditional transformers that use silicon steel cores, this type features an amorphous metal core made of thin, flexible alloys with a disordered atomic structure. The unique properties of the amorphous core significantly reduce core losses, especially under no-load or low-load conditions, making it highly energy-efficient. Amorphous core distribution transformers are widely adopted in power grids aiming to minimize energy waste, reduce operational costs, and support sustainability goals. Their durability, low maintenance needs, and eco-friendly performance make them a preferred choice for modern energy distribution networks.

The major global manufacturers of Amorphous Core Distribution Transformer include Hitachi, Siemens, State Grid Yingda, Jiangsu Yangdian, Toshiba, CG Power, Xian XD Transformer, First Philec, KP Electric, Beijing Creative Distribution Automation, Sunten

Electric, Hezong Science and Technology, Howard Industries, Powerstar, CEEG, Henan Longxiang Electrical, TBEA, Eaglerise, TATUNG, Kumkang Transformer, etc. The global players competition landscape in this report is divided into three tiers.
