Research Summary

Amorphous core transformers are transformers that use a core made from a type of metal alloy that has no crystalline structure, also known as an amorphous metal or metallic glass. The amorphous core material is made by rapidly cooling the molten metal, resulting in a disordered atomic structure with much less internal friction and resistance to magnetic field changes. Amorphous core transformers have lower core losses than traditional silicon steel laminated core transformers, making them more energy efficient, quieter, and cooler-running. They are commonly used in high-efficiency power supplies and renewable energy systems.

The major global manufacturers of Amorphous Core Transformers include Hitachi Industrial Equipment Systems, ABB, Siemens, State Grid Yingda (Zhixin Electric), Toshiba Transmission & Distribution Systems, CG Global, CREAT, Sunten, Yangdong Electric, TBEA, Eaglerise, TATUNG, Henan Longxiang Electrical, Howard Industries, Powerstar, etc. The global players competition landscape in this report is divided into three tiers.
