Research Summary

Amorphous metal ribbons are thin strips of metal alloys that have no defined crystalline structure, giving them unique mechanical and physical properties. These ribbons are typically produced through a process called rapid solidification, which involves cooling molten metal at a very high rate, allowing it to solidify in an amorphous or non-crystalline state. Amorphous metal ribbons exhibit high strength, corrosion resistance, and magnetic properties, making them useful in a range of applications, including electrical transformers, motors, and sensors.
