Research Summary

The Andersen Cascade Impactor is a device used for the particle size distribution analysis of aerosols or airborne particles. It is often used in pharmaceutical and environmental research to measure the efficacy of air filtration systems, drug inhalers, or to determine the distribution of pollutants in the air. The device works by using a series of plates with progressively smaller holes to separate particles according to their size. The particles are collected on each plate and the mass of particles per plate is measured, allowing the particle size distribution of the sample to be determined.
