Research Summary

Anti-corrosive pigment is a type of coating additive that is added to coatings and paints to prevent or reduce the corrosion of metal surfaces. These pigments work by creating a barrier between the metal surface and the environment, thus preventing moisture and other corrosive elements from reaching the metal surface. Anti-corrosive pigments can be organic or inorganic, with some of the most popular ones being zinc phosphate, zinc chromate, and strontium chromate. These pigments are commonly used on steel structures, automotive parts, and marine equipment, among others.
