### Research Summary

Anti-decubitus dynamic mattresses are specialized mattresses designed to prevent the formation of pressure ulcers (also known as bedsores) in bedridden or immobile patients. These mattresses use alternating pressure technology or air cells that are inflated and deflated in a controlled manner to redistribute the patient's body weight and prevent prolonged pressure on any one area of the body. This reduces the risk of tissue damage and promotes better blood flow to the affected body parts, helping to prevent the development of pressure ulcers. Anti-decubitus dynamic mattresses are commonly used in hospitals, nursing homes and home care settings as part of the treatment plan for patients at risk of pressure ulcers.
