### Research Summary

Anti-rust coatings are specialized formulations applied to metal surfaces to protect them from corrosion caused by exposure to moisture, air, and other corrosive agents. These coatings typically form a barrier that prevents moisture and oxygen from reaching the metal substrate, thereby inhibiting the electrochemical reactions that lead to rust formation. Anti-rust coatings can be classified into various types, including organic coatings (such as paints and lacquers), inorganic coatings (such as zinc coatings and phosphate conversion coatings), and composite coatings (combining multiple materials for enhanced protection). These coatings are widely used in industries ranging from automotive and aerospace to marine and construction, where protecting metal surfaces from corrosion is essential for prolonging the lifespan and ensuring the integrity of structures and equipment.

The major global manufacturers of Anti-Rust Coatings include Sherwin-Williams, RPM International, PPG, AkzoNobel, Nippon Paint, 3M, Jotun, Kansai Paints, Hempel, DuPont, NOF Metal Coating, ThreeBond International, etc. The global players
