Research Summary

Anti-static plates are specialized materials designed to prevent the buildup and accumulation of static electricity, which can cause damage to sensitive electronic components and devices. Made from conductive or dissipative materials, these plates help to neutralize static charges by either absorbing or safely discharging them into the surrounding environment. Commonly used in electronics manufacturing, assembly, and testing environments, anti-static plates are essential for protecting circuits, microchips, and other sensitive components during handling, packaging, and storage. These plates are typically used in conjunction with other anti-static products, such as mats, wrist straps, and bags, to create a controlled environment that minimizes the risk of electrostatic discharge (ESD). By reducing the potential for static buildup, anti-static plates play a critical role in ensuring the integrity and functionality of electronic devices and components.

The major global manufacturers of Anti-Static Plates include Mitsubishi Chemical, Sekisui, Sumitomo Bakelite, Takiron, MEC Industries, DECORON, Garland, GRIFFEN,
