Research Summary

Antimicrobial coated catheter is a medical device that incorporates a special coating that prevents bacterial and other microbial growth on the surface of the catheter. The coating contains an antimicrobial substance that acts as a barrier against microorganisms that can cause infections in the urinary tract, bloodstream, and other parts of the body. Antimicrobial coated catheters are commonly used in hospitals and other healthcare settings, especially for patients who are prone to infections, such as those who are recovering from surgery or have weakened immune systems. These catheters are designed to reduce the risk of infection and complications associated with catheter use, which can improve patient outcomes and reduce healthcare costs.
