Research Summary

Antiscalant is a chemical additive that is used in various industrial processes to prevent the buildup of scale on surfaces. It works by inhibiting the formation and growth of mineral deposits on equipment such as boilers, heat exchangers, and pipelines. Antiscalants are commonly used in water treatment and desalination processes, where high concentrations of dissolved minerals can cause scaling and reduce the efficiency of equipment. Antiscalants are typically added to the water stream before it enters the equipment and can be customized to target specific types of minerals and prevent scaling in different types of industrial systems.

The major global manufacturers of Antiscalant include BASF, NALCO, Dow Chemical, BWA Water Additives, Italmatch Chemicals Group, Ashland, Avista Technologies, Clariant, Kemira OYJ, General Electric, American Water Chemicals, Veolia, etc. The global players competition landscape in this report is divided into three tiers.
