### Research Summary

An Application Delivery Controller (ADC) is a networking device or software solution that manages and optimizes the delivery of applications across a network. ADCs play a crucial role in enhancing the performance, availability, security, and scalability of applications accessed by users over the network. Key functions of ADCs include load balancing, which distributes incoming network traffic across multiple servers or resources to optimize resource utilization and ensure high availability of applications. They also perform SSL offloading, handling the encryption and decryption of SSL/TLS traffic to reduce server overhead and improve performance.
