Research Summary

An Application Programming Interface (API) is a set of rules and protocols that defines how different software components should interact with each other. It allows software applications to communicate with each other and share data and services, without users having to know how they are implemented behind the scenes. APIs provide a consistent, standardized way for programs to exchange information, making it easier for developers to create new applications, integrate different systems, and streamline business processes. APIs can be accessed through a variety of programming languages, and are commonly used in web service integration, mobile app development, and Internet of Things (IoT) applications.

The major global suppliers of Application Programming Interface (API) include Fortumo, Alcatel-Lucent, LM Ericsson, Huawei Technologies, LocationSmart, Tropo, Comverse, Hewlett-Packard Development, Apigee Corp, Axway Software, Aepona, ZTE Soft Technology, Orange S.A, Twilio, Oracle Corp, Nexmo, AT&T, etc. The global players
