### Research Summary

Aquaponics is a sustainable farming system that combines aquaculture (the raising of aquatic animals such as fish) with hydroponics (the cultivation of plants in water without soil) in a symbiotic environment. This closed-loop system uses fish waste to fertilize the plants and the plants in turn filter the water for the fish to live in. Aquaponics is a highly efficient and eco-friendly way of producing vegetables, fruits, and fish, with minimal water usage and chemical inputs compared to traditional farming methods.

The major global manufacturers of Aquaponics include Nelson and Pade, Aquaponic Source, Backyard Aquaponics, Aquaponics USA, PentairAES, Gothic Arch Greenhouses, Stuppy, ECF Farm Systems, Urban Farmers, PFAS, EcoGro, Aquaponic Lynx, Aquaponics Place, Endless Food Systems, Aonefarm, Japan Aquaponics, Evo Farm, Water Farmers, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier

includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
