Research Summary

Aramid fiber paper is a high-performance material made from aramid fibers, which are synthetic fibers known for their exceptional strength, heat resistance, and durability. Aramid fibers, such as those marketed under the brand names Kevlar® and Nomex®, are composed of long-chain aromatic polyamides. Aramid fiber paper is produced by processing these fibers into a non-woven fabric through techniques such as wet-laying, air-laying, or carding. The resulting paper exhibits outstanding mechanical properties, including high tensile strength, tear resistance, and dimensional stability. Additionally, aramid fiber paper offers excellent thermal stability and flame resistance, making it suitable for use in demanding applications where heat and fire protection are critical. Common applications of aramid fiber paper include insulation for electrical equipment, gaskets, seals, friction materials, and protective clothing for firefighters and industrial workers. Its combination of strength, heat resistance, and versatility makes aramid fiber paper a valuable material in various industries.

The major global manufacturers of Aramid Fiber Paper include Dupont, Metastar,

LongPont, etc. The global players competition landscape in this report is divided into three tiers.
