Research Summary

Aramid Fiber Reinforced Polymer (AFRP) is a composite material that is made up of aramid fibers, such as Kevlar or Twaron, and a polymer matrix, such as epoxy or polyester. The aramid fibers provide high tensile strength and stiffness, while the polymer matrix bonds the fibers together and distributes load across the composite material. AFRP is often used in structural reinforcement applications (such as bridges or buildings) where high strength and durability are required. AFRP is also lightweight, corrosion-resistant, and has a long lifespan, making it an attractive alternative to traditional steel reinforcements.

The major global manufacturers of Aramid Fiber Reinforced Polymer (AFRP) include DuPont, Teijin, Advanced Composites, Lanxess, TenCate, Celanese, PolyOne, AXIA Materials, Lingol, Protech, Lengine, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess

strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
