### Research Summary

An Arc Fault Circuit Interrupter (AFCI) is an electrical safety device that detects and prevents the sparking or arcing that can occur in electrical circuits. AFCIs are designed to protect against electrical fires caused by arcing faults, which can result from damaged or deteriorating wires, improper wiring, or other electrical issues. AFCIs are typically installed in circuit breaker panels or at the outlets themselves and are required by the National Electrical Code in certain areas of a home or building. When an AFCI detects an arcing fault, it quickly cuts off power to the affected circuit to prevent electrical fires.
