Research Summary

Architectural shading systems are specialized elements incorporated into building designs to regulate sunlight, heat gain, and glare within indoor spaces. These systems encompass a variety of exterior and interior shading devices such as awnings, louvers, blinds, shades, and films, strategically placed to manage natural light penetration and thermal comfort. Exterior shading devices, like brise-soleil and external blinds, intercept and diffuse direct sunlight before it reaches building surfaces, reducing solar heat gain and minimizing the need for mechanical cooling. Interior shading devices, such as curtains and shades, allow occupants to adjust light levels and privacy while controlling heat gain during peak sunlight hours. By optimizing daylighting and mitigating solar heat gain, architectural shading systems contribute to energy efficiency, occupant comfort, and sustainable building design practices.

The major global suppliers of Architectural Shading Systems include Skyco Shading Systems, Solinear, Insolroll, InSync Solar, SWFContract, Colt, Roda Licht-Und Lufttechnik, Duco Ventilation and Sun Control, Fraser Shading Systems, etc. The global
