Research Summary

Artificial meat, also known as lab-grown meat or cultured meat, is meat that is produced by growing animal cells in a laboratory rather than by harvesting animals from farms. It is typically made by taking a small tissue sample from an animal and then using stem cells to grow those cells in a culture medium that includes nutrients, growth factors, and other components that support cellular growth. Over time, the cells multiply and eventually form muscle tissue that resembles that of a real animal, which can then be harvested for consumption. Artificial meat is seen as a potentially sustainable and ethical alternative to traditional meat production, which is associated with negative environmental and animal welfare concerns.

The major global manufacturers of Artificial Meat include Beyond Meat, Impossible Foods, Turtle Island Foods, Field Roast, Yves Veggie Cuisine, Amy's Kitchen, Kellogg's?Morningstar Farms?, LightLife?Maple Leaf Foods?, Qishan Foods, Hongchang, Sulian, Sutianxia, etc. The global players competition landscape in this report is divided into three tiers.
