Research Summary

An atmospheric pressure plasma surface treatment machine is a device designed to enhance the surface properties of materials by using plasma technology under normal atmospheric conditions. Plasma, a state of ionized gas, is generated by applying an electrical discharge to a gas, which then interacts with the material's surface. This treatment effectively cleans, activates, or modifies the surface to improve adhesion, wettability, or coating capabilities without requiring a vacuum environment. Commonly used in industries such as automotive, electronics, medical devices, and packaging, it provides an eco-friendly alternative to chemical treatments, reducing the use of solvents and primers while ensuring high precision and efficiency.

The major global manufacturers of Atmospheric Pressure Plasma Surface Treatment Machine include PVA TePla, Plasmatreat, Diener Electronic, Enercon Industries Corporation, Oksun, Tonson Tech, Fuji Corporation, Arcotec, Bdtronic, CRF Plasma,
