Research Summary

Atomic Absorption Spectroscopy (AAS) instrument is a technique that is used to measure the concentration of metals or metalloids in a sample. It involves the measurement of the absorption of light by the atoms in a sample that is excited by a light source of a specific wavelength. The instrument contains a light source, a sample holder, and a detector. The sample is introduced into the instrument and subjected to a high-energy light beam from the light source. The atoms in the sample absorb some of the energy from the light, which causes them to become excited. The detector in the instrument measures the amount of energy absorbed and converts this into a concentration value. AAS is used in a variety of applications, including environmental monitoring, food analysis, and clinical diagnostics.

The major global manufacturers of Atomic Absorption Spectroscopy Instrument include PerkinElmer, Agilent Technologies, Thermo Fisher Scientific, Shimadzu, Hitachi High-Technologies, GBC Scientific, Beifen-Ruili, Persee, PG Instruments, EWAI, Analytik
