By 2025, China's market size is expected to be Million USD, representing approximately % of the global market share.

Research Summary

ATP fluorescence detectors are devices that detect adenosine triphosphate (ATP) fluorescence and measure the level of ATP in a sample. ATP is a molecule found in living cells and is an indicator of their presence. The detectors work by using a chemical reaction that causes ATP to emit light when it is present in a sample. This light is then detected by a fluorescence detector, which measures the intensity of the emitted light. ATP fluorescence detectors are commonly used in the food industry for hygiene monitoring, as well as in healthcare settings for detecting bacterial contamination on surfaces and equipment.

The major global manufacturers of ATP Fluorescence Detectors include 3M, Merck, Creative Diagnostics, Berthold Technologies, Charm Sciences, Ruhof, Hygiena, Kikkoman Biochemifa, Neogen, LuminUltra, Shandong Hengmei Electronic Technology, Xi'an Tianlong Science and Technology, Qingdao Lubohongye Environmental Protection Technology Development, Shandong Meizheng Bio-Tech, Ningbo Meicheng Biotechnology, etc. The global players competition landscape in this report is divided
