Research Summary

Atrial fibrillation devices are medical devices that are used to diagnose and treat atrial fibrillation (AF). These devices are designed to either monitor the heart's rhythm or to help control the heart's rhythm when it becomes irregular. Some of the devices used in AF management include: 1. Implantable cardioverter defibrillators (ICDs): These devices are implanted under the skin of the chest and deliver electrical shocks to the heart when it beats too fast or too slow. 2. Pacemakers: These devices are placed under the skin of the chest and use electrical impulses to help control the heart's rhythm. 3. Cardiac resynchronization therapy (CRT) devices: These devices are used to synchronize the beating of the heart's chambers in patients with heart failure and atrial fibrillation. 4. Catheters: These thin, flexible tubes are inserted into a blood vessel in the groin and threaded up to the heart to diagnose and treat AF. The type of device used depends on the individual patient's medical history, age, and overall health condition.

The major global manufacturers of Atrial Fibrillation Devices include Johnson & Johnson, Abbott, Medtronic, Japan Lifeline, Boston Scientific, Atricure, Biotroik,
