### Research Summary

Audio signal capacitors are capacitors designed specifically for use in audio circuits, such as those found in amplifiers or speakers. They are used to filter or block unwanted frequencies, smooth out voltage fluctuations, and store or release electrical energy. These capacitors are commonly made from materials such as metallized polypropylene or tantalum, which offer higher tolerances, lower distortion, and better performance at high frequencies than standard capacitors. Audio signal capacitors are an important component in high-quality audio systems, contributing to the overall clarity, precision, and accuracy of the sound.
