### Research Summary

Auto Brake Fluid is a special type of hydraulic fluid that is used to transfer the force of pressing down on the brake pedal to the brake calipers or drum brakes, which in turn applies pressure to the brake pads or shoes. This fluid is essential in creating the hydraulic pressure required for brake operation in modern cars and trucks. It is often made from a blend of glycols and ether-based fluids that meet strict standards for viscosity, boiling point, and corrosion resistance. Proper maintenance and replacement of auto brake fluid are important for optimal brake performance and safety on the road.
