### Research Summary

Auto catalysts, also known as automotive catalytic converters, are critical components in vehicle exhaust systems designed to reduce harmful emissions by converting toxic gases—such as carbon monoxide (CO), nitrogen oxides (NO<sub>x</sub>), and unburned hydrocarbons—into less harmful substances like carbon dioxide (CO<sub>2</sub>), nitrogen (N<sub>2</sub>), and water vapor. They achieve this through catalytic reactions facilitated by precious metals such as platinum, palladium, and rhodium coated onto a ceramic or metallic substrate. Auto catalysts play a vital role in helping vehicles comply with environmental regulations by significantly decreasing air pollution and are essential for both gasoline and diesel engines in cars, trucks, and other combustion-powered vehicles.

The major global manufacturers of Auto Catalysts include BASF, Johnson Matthey, Umicore, Cataler, Sino-Platinum, N.E. Chemcat, Wuxi Weifu Environmental Catalysts, Tokyo Roki, Sinocat, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong

competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
