### Research Summary

Autocollimators are optical instruments used for measuring the angular alignment of optical systems. They work by projecting a collimated beam of light onto a reflector and then receiving the reflected beam back into the instrument. The autocollimator then measures the angle between the incoming and reflected beam. Autocollimators are commonly used in precision alignment of optical systems in manufacturing, engineering, and research. They are also used in metrology to measure the flatness and parallelism of surfaces.

The major global manufacturers of Autocollimators include TAYLOR HOBSON, Haag-Streit, Nikon Metrology, TRIOPTICS, Newport Corporation, Micro-Radian Instruments, Duma Optronics, PLX, Standa, Edmund Optics, Shanghai Optical Instrument, Logitech Limited, Shanghai Institute of Optical Instrument, Prisms India, ZG Optique, Keaoda, etc. The global players competition landscape in this report is divided into three tiers.
