Research Summary

Automated Marine Debris Collection Equipment are mechanical systems designed to remove and collect floating marine debris such as plastics, fishing nets, and other waste materials found in oceans, rivers, or lakes. These machines are often equipped with sensors and GPS trackers to locate debris, and then use nets or other collection mechanisms to scoop the debris from the water. The collected debris is usually stored onboard the machines before being transported to shore for proper disposal. The equipment aims to reduce the amount of marine debris in the ocean, making it safer for marine life and improving the health of the ecosystem.
