Research Summary

An Automatic Artificial Lifting Device (AALD) is a piece of equipment used in the oil and gas industry to increase the production of oil and gas wells. AALDs are designed to automatically control the rate of fluid flow into the well, thereby lowering the pressure required to extract the oil or gas from the reservoir. This device uses mechanical, electrical, or hydraulic systems to provide constant, consistent force to keep the fluid moving out of the reservoir and up the wellbore. AALDs are commonly used in high-volume wells, or in wells that require more force to keep the fluid flowing, such as wells in deep-water drilling operations or in oil sands extraction.

The major global manufacturers of Automatic Artificial Lifting Device include Weatherford, Schlumberger, General Electric, GE(Baker Hughes), Halliburton, Dover, National Oilwell Varco, Borets, Novomet, Cameron, etc. The global players competition landscape in this report is divided into three tiers.
