Research Summary

An automatic bottle blowing machine is a manufacturing machine that is used to produce plastic bottles automatically. It uses a process called blow molding to create a hollow object from a thermoplastic material. The machine heats and extrudes plastic material into a preform shape, which is then clamped into a mold. The mold is then filled with compressed air, causing the plastic to expand and take the shape of the mold. The end result is a fully formed plastic bottle. Automatic bottle blowing machines are commonly used in the beverage and packaging industries for the production of bottles of various sizes and shapes.
