Research Summary

An automatic climbing system is a type of construction machinery used for high-rise building construction. It is designed to move vertically and horizontally to lift and transport building materials and equipment to higher levels of the building. The system consists of a climbing frame, a working platform, and a hydraulic or electrical mechanism that moves the system up and down the building's exterior. This allows workers to access different levels of the building safely and efficiently while minimizing downtime and reducing the risk of accidents. Automatic climbing systems are commonly used in the construction of tall buildings, bridges, and other structures that require complex and continuous construction activities.

The major global manufacturers of Automatic Climbing System include PERI Ltd, Doka GmbH, BrandSafway, EFCO Corp, ULMA, MEVA, Kitsen, Zulin, Baili, Acrow Misr, TECON, Climbform Engineering, HAEGANG, NuForm System Asia, Jacking Systems, etc. The global players competition landscape in this report is divided into three tiers.
