Research Summary

An Automatic Potentiometric Titrator (APT) is an analytical instrument used for the titration of acid-base reactions, redox reactions, complexometric reactions, precipitation reactions, and many other chemical reactions. It is a computer-controlled device that allows the precise measurement of the volume of titrant required to reach the equivalence point of the reaction. The APT works by measuring the potential difference between the electrode in the titrant solution and the electrode in the solution being titrated. The titrant is added slowly until the potential difference reaches a fixed value, indicating that the endpoint has been reached. The APT is widely used in analytical chemistry, environmental analysis, pharmaceutical analysis, food analysis, and other areas of research and industry.

The major global manufacturers of Automatic Potentiometric Titrator include Mettler Toledo, Metrohm, Xylem, Hach, Hanna, KEM, Hiranuma, Inesa, Hanon, DKK-TOA, etc. The global players competition landscape in this report is divided into three tiers.
