Research Summary

Automatic Train Control (ATC) is a system used in railways that automatically controls the speed and movement of trains to ensure safe operations. The system relies on a network of sensors and signals to detect the speed and location of trains and communicate with them to regulate their movement. ATC can provide several levels of control, such as automatic train protection (ATP), which monitors train speed and stops the train if it approaches a danger point, or automatic train operation (ATO), which allows trains to operate without manual intervention. ATC helps to reduce the risk of train accidents caused by human error and improves operational efficiency.

The major global manufacturers of Automatic Train Control (ATC) include Hitachi, Thales, Alstom, Bombardier, Nippon Signal, CRSC, Traffic Control Technology, Siemens, Kyosan, Toshiba, Unittec, Glarun Technology, Mermec, etc. The global players competition landscape in this report is divided into three tiers.
