Research Summary

An automobile cylinder sleeve, also known as a cylinder liner, is a cylindrical component that is inserted into the engine block to provide a surface for the piston to travel on, thus forming a cylinder. The cylinder sleeve may be made of cast iron, steel, or aluminum and is typically installed into the cylinder bore of an engine block to restore the engine's compression and power capabilities. Cylinder sleeves are often used in engines that experience excessive wear or damage to the cylinder walls, or for engines that require an upgrade in strength or performance.
