Research Summary

An automobile gas-charged shock absorber, also known as a gas-filled shock absorber or gas strut, is a type of suspension component used in vehicles to dampen and absorb shocks and vibrations from the road surface. Unlike traditional hydraulic shock absorbers filled with oil, gas-charged shock absorbers contain a pressurized gas, typically nitrogen, in addition to hydraulic fluid. This design provides several advantages, including reduced foaming and cavitation of the hydraulic fluid, resulting in more consistent damping performance and improved responsiveness. Gas-charged shock absorbers also help prevent aeration of the fluid, which can occur during rapid and repeated movements, maintaining optimal damping characteristics under varying driving conditions. These shock absorbers are commonly used in modern vehicles to enhance ride comfort, stability, and handling by effectively controlling the movement of the suspension system and minimizing bouncing or oscillations after bumps or impacts on the road.

The major global manufacturers of Automobile Gas Charged Shock Absorber include Gabriel India, Samvardhana Motherson Group, Magneti Marelli, Tenneco, Meritor, ZF Friedrichshafen, Hitachi Automotive Systems, Showa, KYB, thyssenkrupp, ITT, Arnott, ZF Friedrichshafen, KONI, Duro Shox, etc. The global players competition landscape in this report is divided into three tiers.
