Research Summary

Automobile rainfall sensors are advanced devices integrated into vehicles to detect precipitation on the windshield and automatically activate the wipers. These sensors typically use infrared light technology, emitting beams that reflect off the windshield. When raindrops disrupt the reflection, the sensor detects the change and adjusts the wiper speed accordingly, based on the intensity of the rainfall. This hands-free functionality enhances driver safety and convenience by maintaining clear visibility in varying weather conditions without manual intervention. Rainfall sensors are commonly found in modern vehicles as part of advanced driver-assistance systems (ADAS), contributing to a more automated and comfortable driving experience.

The major global manufacturers of Automobile Rainfall Sensors include Hella (FORVIA), Valeo, Kostal, Denso, Shanghai Baolong Automotive Corporation, Jiangsu Riyong Electronics, Huagong Technology, WuHu Grand Vision Auto Electronics, etc. The global players competition landscape in this report is divided into three tiers.
