Research Summary

An automotive aluminum heat exchanger is a device used in vehicles to transfer heat from one fluid to another. It is made from aluminum and is used to cool the engine coolant, transmission fluid, and other fluids in the vehicle. The heat exchanger is made up of a series of tubes and fins that allow the fluids to flow past each other, transferring heat from the hot fluid to the cool fluid. Automotive aluminum heat exchangers are preferred over other materials due to their lightweight, corrosion resistance, and high thermal conductivity.
