### Research Summary

An automotive auto-dimming mirror is a type of rearview mirror that uses electrochromic technology to automatically dim itself when there is a strong source of light behind the vehicle. This technology helps to reduce glare from the headlights of vehicles behind the driver, which can be distracting and potentially dangerous. The mirror uses sensors to detect light levels and adjust the tint of the mirror's glass accordingly, making it easier for the driver to see and safely navigate the road. In addition to enhancing safety, auto-dimming mirrors can also help to reduce eyestrain and provide greater comfort for drivers during night-time driving.
