Research Summary

Automotive Automatic Glass Blaster improves the safety performance of the vehicle. Automatic glass blasting devices are installed on the windows so that in the event of fire, terrorist attacks, etc., passengers in the car can quickly escape through the windows. The glass blaster acts like a "scaled-down automatic safety hammer," rather than being mounted on the wall next to the glass like a safety hammer. The control button is set on the instrument panel in front of the driver. When the driver lightly presses the red centralized start button on one side of the instrument panel, the 4 pieces of glass installed with the automatic glass blaster in the car will instantly break outwards. Passengers can quickly start from these Windows escape.
