### Research Summary

An automotive brake booster is a device used in a vehicle's braking system to amplify the force applied to the brake pedal, making it easier for the driver to stop the vehicle. The brake booster is typically located between the brake pedal and the master cylinder and operates by using vacuum pressure to increase the force applied by the driver to the pedal. This improves the overall braking performance of the vehicle and helps prevent accidents by reducing stopping distances. Brake boosters are commonly found in most modern passenger vehicles, commercial trucks, and heavy-duty machinery.
