Research Summary

Automotive brake lining is a material that is attached to the brake shoes or brake pads in a vehicle to create friction with the brake drum or rotor, which ultimately helps to slow down or stop the vehicle. The brake lining is typically made of a composite material that consists of resins, fillers, and fibers, and is designed to withstand high temperatures and wear. When the brake pedal is pressed, the brake lining creates the necessary friction to slow down or stop the vehicle. Automotive brake lining is a crucial component of a vehicle's braking system, as it ensures safe operation by providing reliable braking performance.
