Research Summary

Automotive Capless Devices (ACD) are a type of fuel filler system used in modern vehicles. Unlike traditional fuel caps, ACDs do not require a cap to cover the fuel opening. Instead, they use a self-sealing mechanism that automatically closes and seals the opening when the fuel nozzle is removed. This eliminates the need to manually tighten or remove a cap, making refueling quicker and more convenient. ACDs are designed to help prevent fuel vapour emissions and improve fuel efficiency. They are also less prone to damage or loss compared to traditional fuel caps. Some ACDs are equipped with anti-theft features that prevent fuel siphoning, making them a popular option for fleet vehicles and commercial use. Overall, ACDs provide a cleaner, more efficient, and convenient way to fuel modern vehicles.
