Research Summary

An automotive crash test barrier, also known as a crash test barrier or impact attenuator, is a device used in physical crash tests to simulate a collision between a vehicle and an object or obstacle. It is an important tool for automotive safety testing and evaluation. Crash test barriers are designed to replicate the behavior of typical roadside objects or obstacles, such as concrete walls, guardrails, or other vehicles. It is usually made of a rigid structure, usually using steel or another strong material, to withstand the forces generated during a crash. During the crash test, the vehicle under test is pushed against the crash test barrier at a specified speed and angle. Obstacles are positioned in such a way as to represent expected crash scenarios, such as frontal, side or rear collisions.

The major global manufacturers of Automotive Crash Test Barrier include Argosy XAC Composite Materials, AFL Honeycomb, Plascore, Cellbond, MESSRING GmbH, Hexcel, Encocam, etc. The global players competition landscape in this report is divided into three tiers.
