Research Summary

An automotive dashboard camera, commonly known as a dash cam, is a compact video recording device mounted on the dashboard or windshield of a vehicle to capture footage of the road ahead and the interior of the vehicle. These cameras record continuously while the vehicle is in motion or triggered by events such as sudden braking, impact, or motion detection. Dash cams are equipped with high-definition cameras, wide-angle lenses, and built-in storage or memory card slots to store recorded footage. They are used for various purposes including documenting accidents or incidents, providing evidence in insurance claims, monitoring driving behavior, and capturing scenic road trips.
