Research Summary

Automotive dimming glass, also known as auto-dimming glass or electrochromic glass, is a type of smart glass technology used in vehicles to automatically adjust the tint level of the glass based on external light conditions. It provides improved visibility and comfort by reducing glare and blocking excessive sunlight. The technology behind automotive dimming glass involves a thin layer of electrochromic material sandwiched between two layers of glass or plastic. This material can change its opacity or tint when an electric current is applied. The glass typically contains a small electronic control unit that monitors the ambient light conditions and activates the dimming process when necessary. When the sensor detects intense sunlight or glare, it sends a signal to the electrochromic layer, causing it to darken and reduce the amount of light transmitted through the glass. This automatic adjustment helps to improve visibility and reduce eye strain for the vehicle occupants.

The major global manufacturers of Automotive Dimming Glass include Gentex Tech, Fuyao Group, Shanghai Honghu Industry, Guangzhou Ouyi Building Material, Sichuan
